In view of the upcoming Viscom event in Milan, which takes place from the 13th until the 15th of October, Summa introduces yet another size within the F Series' gamut: the F1330 flatbed cutter. During this event Summa's Italian distributor, SofTeam, will be demonstrating the F1330 in hall 8 at their booth E39/F42.

"Since the launch in 2010 of the first size within the F Series, the F1612, sales have been growing continuously. The diversity and flexibility, as well as the durability of the unit are most valued by signmakers worldwide. Because of this tremendous success the demand for a larger equivalent was not long off. We then responded with the introduction of the F2630 in 2015. Within the extended Signmaking market, which is Summa's core market, especially customers from the US and the Asian market, now also have been expressing their interest in yet another size of flatbed cutter. This is how the F1330 unit claimed its existence".

Performance and Size

With a working area of 1.29m x 3.05m the F1330 flatbed cutter mainly focusses on the processing of rigid board material, cutting vinyl and applications in the traffic sign market. The F1330 flatbed cutter is compatible with all tools available on the F1612 and F2630 flatbed cutters.

Pricing and availability

F1330 units can be ordered as we speak. Availability is upon request. Pricing depends on the chosen configuration of the unit. Please contact your sales representative for price-related questions.
